PROFILE SUMMARY

Full Stack Developer with hands-on experience building responsive web and mobile applications using React, Tailwind CSS, TypeScript, MySQL, and MongoDB, along with backend services in Java Spring Boot. Skilled in designing RESTful APIs, integrating third-party data sources, and building interactive, data-driven UIs with tools like Chart.js and Redux. Comfortable working across the full stack, from database design to deployment on cloud platforms like Railway.app. Currently deepening skills in Docker, Linux, Java, Python, Kotlin, and React Native. Always eager to learn new tools and sharpen development skills.

PROJECTS

Shopping App - Java Spring Boot, React, MySQL [GitHub-Link](https://github.com/birbalkr/Shopping-Online): github.com/birbalkr/Shopping-Online

An e-commerce web application for browsing products.

- Developed the backend using Java Spring Boot, creating RESTful APIs for product management (GET, POST, PUT, DELETE).
- Built the frontend using React with Vite for a fast and responsive user interface.
- Used MySQL to store and manage data for users and products.
- Deployed the application using Railway.app for simplified cloud hosting.

Crypto Coin Tracker - React, Tailwind CSS, Chart.js, Millify, Redux, Ant Design, Axios

A real-time cryptocurrency price tracker that provides live price updates, historical data, and detailed information for various cryptocurrencies, complete with interactive charts and a responsive design. [Live Demo](https://rococo-valkyrie-c74458.netlify.app): rococo-valkyrie-c74458.netlify.app

- Built the front-end using React and Tailwind CSS, ensuring a responsive, user-friendly interface across desktops, tablets, and mobile devices.
- Integrated RapidAPI via Axios to fetch live cryptocurrency data, including prices, market cap, and volume.
- Used Chart.js (react-chartjs-2) to display interactive, real-time charts for crypto trends and historical performance.
- Formatted large numeric values (market cap, volume) using Millify for cleaner readability.
- Styled data tables and UI components with Ant Design for a polished, consistent look.
- Managed global state with Redux for a seamless user experience across the app.

SkyMart - React, Vite, Tailwind CSS, React Router, React Hook Form, Axios, Lucide React

An e-commerce web application with product browsing, cart, and authentication. [Live Demo](https://skymart-project.netlify.app): skymart-project.netlify.app

- Built the front-end using React 19 and Vite, structured into components, pages, routes, and a dedicated API layer, with core pages for Home, Shop, Product, Cart, and About.
- Implemented Sign-in and login routes for user authentication, and used React Context to manage global state like cart data and user session.
- Organized API calls in a dedicated ShopAPI module using Axios, with routing handled via React Router; styled with Tailwind CSS and validated forms with React Hook Form.
- Deployed the application on Netlify for continuous deployment and easy sharing.

HACKATHONS

Hack Horizon 2.0 — Farm-to-Market Crop Tracking System - React.js, Node.js, Express.js,

MongoDB/PostgreSQL, REST APIs, QR Code Integration [GitHub-Link](https://github.com/birbalkr/hackathon_repo): github.com/birbalkr/hackathon_repo

24-hour national-level hackathon at ARKA JAIN University, Jharkhand (April 2026). Built a web-based crop traceability platform connecting farmers, transporters, warehouses, and retailers.

- Designed a stakeholder registration and verification system, and implemented QR-based crop batch tracking so consumers can scan and view a product's full supply chain journey.
- Built a centralized data logging system to record batch status, location, and condition updates at each supply chain stage.
- Contributed to an analytics dashboard and system architecture covering frontend, backend, database, and IoT sensor integration as part of a team.

SKILLS

- React, Tailwind CSS, MySQL, MongoDB, TypeScript, Docker, Linux (Ubuntu)
- Java, Python, Kotlin, React Native, Spring Boot, Node.js, Express.js, Kubernetes, DigitalOcean
- Git, GitHub, REST API Design, Chart.js, Redux, Axios
